

Anatomy of a Routine Eye Exam

Total Expected Visit Time:
1 - 1.5 hours

:05-:15

ARRIVAL

Welcome to the Eye Clinic of Wisconsin! Our Patient Services Representative will check you in at our front desk. They will verify your insurance, appointment information, and collect any co-pays due. You will then be guided to the main waiting room to relax while your medical team prepares for you.

:10-:15

HISTORY AND REFRACTION

A medical technician will call your name and guide you to an initial exam room. They will ask you questions about your medical history and health. They will also perform an initial vision test to determine how well you can see. The technician will then perform a refraction to provide you with your glasses prescription.**

****Please note: if you are seeing an Optometrist (OD), the refraction will be performed during the doctor's exam**

:35-:40

DILATION AND TONOMETRY

The technician will prepare your eyes for a more in-depth examination by instilling dilation drops and a mild anesthetic. They will then check the pressure of your eyes, and guide you back to the waiting room. It takes 20-30 minutes for your eyes to fully dilate, so that the doctor can most clearly observe your eye health.

Anatomy of a Routine Eye Exam Continued...

:10-:15

DOCTOR'S EXAM

Your doctor will perform a complete examination of your eye health, and discuss any health concerns with you.

:05-:15

CHECK-OUT AND FILLING YOUR PRESCRIPTION

After all of your concerns have been addressed, a staff member will guide you back to the Patient Services Representatives to check out in our Optical Department. A staff member will provide you with your glasses prescription, if needed. An optician will be available to help you order contacts or select frames.

POST-APPOINTMENT

If you have any questions after your appointment, you are welcome to call 800.472.0033

Thank you for being an Eye Clinic of Wisconsin patient!
